

**ELF : over 50 years
of performance and
passion.**

A brand of passion

*Born on the track, designed for the road,
committed to you.*

For more than fifty years, ELF has built its legend around a strong and unique identity, driven by three core values: Passion, Expertise, Performance.

Thanks to its technical innovations based on cutting-edge research, the brand has made a name for itself in the world of motorsports, pushing the limits of performance and reliability to achieve numerous victories and titles.

With unique expertise gained through privileged partnerships with the most renowned manufacturers, ELF has developed advanced maintenance solutions for all mechanical components according to vehicle type and use.

Whether you're looking for the adrenaline rush of the track, the call of the open road, or simply reliable everyday mobility, ELF supports you with a range of motorcycle lubricants and maintenance fluids that combine technical expertise, mastery, and high standards.

RACER
The ultimate performance

100% SYNTHETIC

Optimal power transfer

Piston cooling and cleanliness

RACER

ELF EXPERTISE AT YOUR SERVICE
FOR PEAK PERFORMANCE

Designed for engines operating at high speeds, the RACER range is formulated from 100% synthetic bases optimized by HTX technology.

It guarantees controlled friction and optimal grip for fast gear changes without loss of torque. ELF formulas are fully compatible with DLC or ceramic surface treatments.

These properties guarantee excellent engine cleanliness to preserve power and efficiency over time.

THE MECHANICAL CHALLENGES OF SPORTS USE

- High friction = risk of premature wear on connecting rods, pistons, and piston rings
- Extreme temperatures = risk of oxidation, loss of viscosity, sludge formation, and varnishing of parts
- Combustion deposits = risk of fouling, loss of compression and power

BENEFITS OF THE RACER RANGE

- Controlled friction coefficient and enhanced protection for moving parts
- Thermal stability and maintenance of oil performance. Compatible with all DLC and ceramic surface treatments.
- Engine cleanliness to maintain performance and power over time

MOTO 2 RACER

* LVFA clutch friction test

With a 22% higher friction coefficient between smooth steel clutch discs and friction discs, MOTO 4 RACER 10W-60 limits slippage and ensures optimized torque transfer for instant response. Comparative tests carried out between ELF MOTO 4 RACER 10W-60 lubricant and a standard JASO MA2 lubricant available on the market.
