

TotalEnergies

TotalEnergies Marketing Czech republic Policy

TotalEnergies health, safety, environmental and quality policy is based on the following ten principles.

ARTICLE 1

TotalEnergies puts the health of people, respect for the environment and the satisfaction of its employees in the first place.

ARTICLE 2

Every development project, every product placed on the market, is first analyzed in terms of possible risks to safety, health and the environment - its entire life cycle is considered.

ARTICLE 3

When choosing industrial and business partners, TotalEnergies prioritizes their ability to uphold its safety, health, environmental and quality policies.

ARTICLE 4

Wherever TotalEnergies operates, it ensures compliance with laws, regulations. and other binding obligations.

ARTICLE 5

Internal safety, environmental and quality management systems, adapted to each individual activity, are regularly evaluated, and the results obtained are measured and targets are set for further progress. Through this policy, we are committed to continuously improving the integrated management system.

ARTICLE 6

In addition to implementing its risk prevention policy, TotalEnergies uses resources and contingency plans for emergencies. He continuously modernizes these tools and checks their effectiveness at regular intervals during the exercises.

ARTICLE 7

Everyone must be aware of their role and personal responsibility in preventing the risks of accidents, damage to health or environmental damage associated with the work they carry out. Attention is paid to the involvement of employees and their representatives in solving health and safety issues, goals, development, performance evaluation and improvement through discussion and participation.

ARTICLE 8

Attention to safety, health, environmental protection and the quality of products and services is an important element in evaluating the work of each individual employee.

ARTICLE 9

In the areas of safety, health, environment and quality, TotalEnergies takes a constructive and transparent approach and is open to dialogue with external partners.

ARTICLE 10

TotalEnergies takes care of controlling its energy needs, greenhouse gas emissions and waste production. In this way, TotalEnergies actively contributes to the implementation of sustainable development policy.
