Fighting Climate Change

Q1 Report 2024

More Energy, Less Emissions

Energy is an essential resource, fundamental to consumers' lifestyles, businesses' competitive performance, and the energy security of consumer countries. To tackle the climate challenge in a just and orderly manner, we must increase the pace of the energy transition while adapting to the specific needs of the various regions around the world.

For further detail about TotalEnergies sustainable strategy, please visit www.totalenergies.com/sustainability/climate-and-sustainability-energy.

TotalEnergies has climate at the heart of its strategy

TotalEnergies has adopted a strategy where it continues to supply the energy the world requires today, while accelerating the transition toward low-carbon energy in a responsible and sustainable way. The Company is taking action to reinvent energy and achieve carbon neutrality by 2050, together with society, by:

- Reducing the emissions generated by its operated facilities, and
- Investing in low-carbon energies and supporting its customers to change their habits.

Furthermore, the Company has acted in the last quarter by:

- Joining forces with SSE to create Source, a new major player in EV charging in the UK & Ireland.
- Selling its interests in West of Shetland gas fields.
- Organising volunteer days to support the Queen Elizabeth Foundation for Disabled People with developing greener outdoor spaces.
- Supporting Willowtown Community Primary School, with their "Big Bocs Bwyd" initiative. This project aims to serve families and the wider community. The "Big Bocs Bwyd" is a converted shipping container that functions as a small community shop with a mission to reduce food poverty and minimize food waste.
- Offering free trials of kWIQly to 4 customers which includes workshops and support for 3-months.
- Offering free bronze AMR to all CCS customers to help monitor usage and accuracy of billing of which 15% of sites currently use, with plans throughout the year to increase this.
