

# Radiator Sealant

Guaranteed prevention of cooling circuit leaks.

## Description

Radiator Anti-Leak provides a simple, effective solution to the problem of small leaks in car radiators, lorries, agricultural vehicles and public works machinery. It stops leaks for good, restores the circuit's watertightness and protects against corrosion thanks to its anti-rust inhibitors.

It is compatible with antifreeze and coolants and has no effect on seals, hoses or metal alloys.

## Properties

- Guaranteed prevention of cooling-circuit leaks.
- A simple and effective solution for existing leak problems.
- Compatible with antifreezes and coolants.
- Waterproofs the cooling circuit.
- Contains corrosion inhibitors.
- Harmless to gaskets, radiator pipes and iron alloys.
- Suitable for cars, trucks, farming vehicles, heavy construction machinery, etc.

## Instructions for use

- 250ml of this product is enough to treat a circuit holding up to 10 litres.
- Rinse the circuit with water.
- Fill the circuit with a mixture of water and antifreeze.
- Close the circuit and run the engine until it reaches its normal running temperature.
- Shake the flask and pour the contents gradually into the radiator, with the engine running slowly.
- Let the engine run for a few minutes longer.

## Composition

Aqueous suspension of polymers and alkaline salts.
