

# The Smart tank solution is:

**1** A choice of sensors to measure your stock levels of:

- > Liquid products: fuel, diesel, lubricants, AdBlue®, wasted oil, etc
- > Gas products: LPG, propane, butane, etc

**2** An effective communication via the strongest local network available in a worldwide coverage

**3** Equipment suitable for:

All types of storage :

- > Aerial or buried, interior or exterior, horizontal or vertical

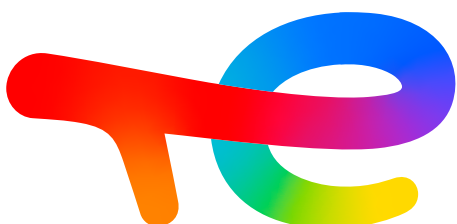

All storage volumes:

- > from 208 liters to more than 200 m<sup>3</sup>

Explosive atmospheres requiring high levels of certification

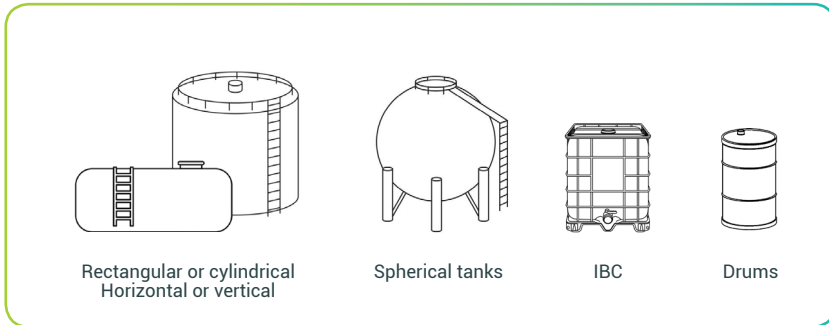

Smart tank is the ideal digital solution to monitor your different stock levels remotely and ensure restocking at the right time

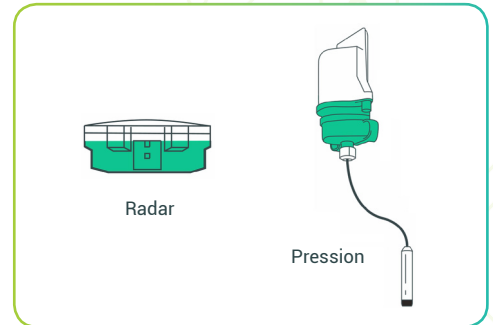

**TotalEnergies**

# How does it work?

## Suitable for all types of storage

## 2 different sensors

## Your stock levels accessible remotely

- > A device that connects to the best local network available, without border barriers
- > A configurable frequency of stock levels reading
- > Different communication protocols to ensure connections
- > A solution that can be used worldwide
- > A solution with integrated service and support

## An user friendly platform with an optimal service

- > Low- and high-level alert settings
- > Graphics and mapping of essential data for an easy and accessible reading on smartphones and tablets
- > Ready-to-use dashboards
- > Data exportable in PDF or Excel format

## Certified devices designed to last long time

- > Low power connectivity (depending on the transmission frequency – lifetime of the device is estimated at approximately 6 years)
- > ATEX, IECRx certification (compatible with liquid and gas products)
- > Different sensors for all types of products

## Affiliate testimonial

“ We have been using the solution for 5 years and we are satisfied with it. We use it in multiple sectors like industry, aviation, construction and agriculture but it is mainly used by garages and car dealers using our automotive lubricants. ”
