

QUARTZ

Quartz Xtra range,
the perfect fit for
hybrid engines

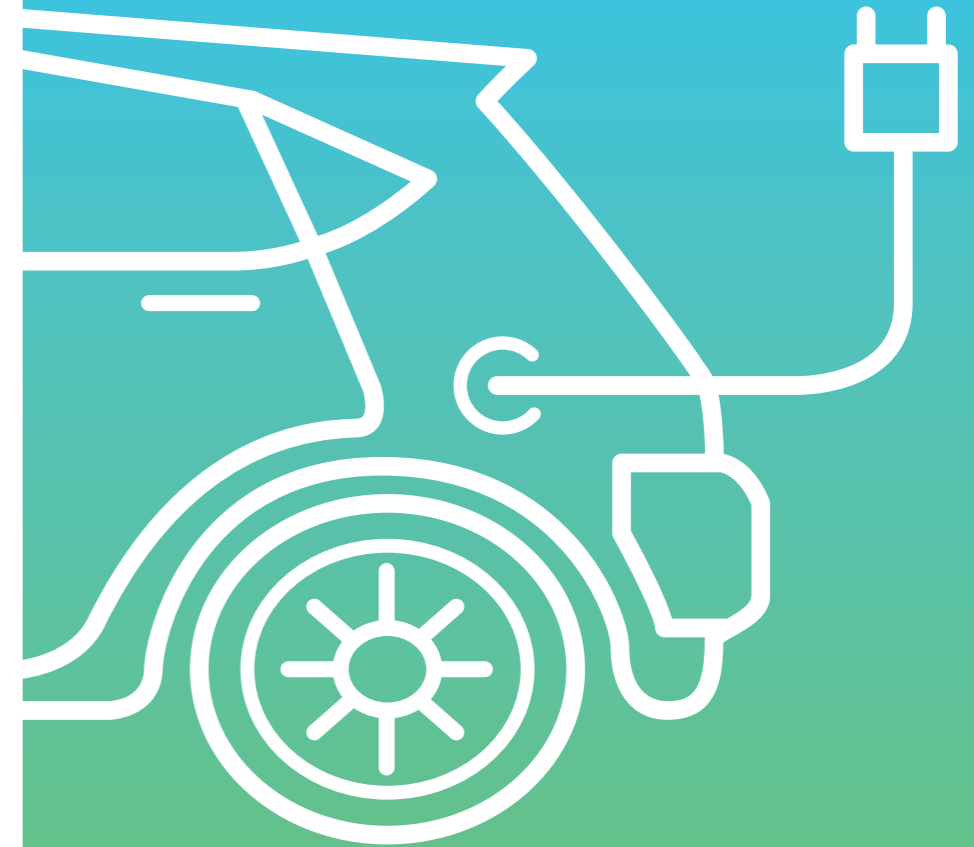

Quartz Xtra, the (r)evolutionary range.

TotalEnergies developed a range of revolutionary lubricants to meet the needs of drivers' engine oil usage and consumption. The newest Quartz Xtra range is designed for the latest generation of engines (such as hybrid, downsized) and provides Xtra fuel economy properties. *In addition, Quartz Ineo Xtra and Quartz 9000 Xtra subranges made in Europe introduce an innovative bottle composed of 50% recycled plastic and 100% recyclable.

ELECTRIC VEHICLES CHARGING SOLUTIONS

TotalEnergies

TotalEnergies and Electromobility

Having a long-term presence in the energy sector and wanting to consistently meet the needs of its customers, TotalEnergies is playing a more and more active role in electrical and sustainable mobility.

Mobility is one of the key pillars of human life and development. Thus, dealing with climate challenge and technology evolution, TotalEnergies is committed to developing and providing solutions in the field of electromobility. In fact, part of its ambition is the function over 150,000 charging stations by 2025 across Europe.

Here are some significant achievements of TotalEnergies worldwide:

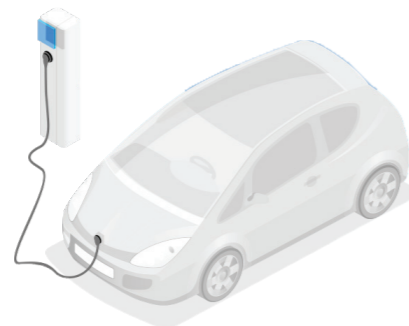

- Installation and operation of 20,000 charging stations in Netherlands.
- Operation of 2,300 charging stations of Bélib network in Paris.
- Operation of the Source London network, with more than 1,600 charging stations in London.
- Operation of the Blue Charge network, with more than 1,500 charging stations in Singapore.

TotalEnergies Marketing Hellas Offer

TotalEnergies Marketing Hellas offers an integrated set of charging services, addressed either to workshops or to other companies wishing to install chargers in their facilities. Specifically, this set includes:

- Supply, installation and complete connection of the charger
- Facilitation of maintenance and support of the user
- Differentiated services depending on the profiles and user needs
- Management of commercial, technical, legal and administrative relations with third parties
- Agreement with a contract for the supply of lubricants

Chargers

Wallbox eNext Elite (wall mounted)

Designed to be installed in both indoor and outdoor workplaces or car parks, for public or private use.

- Smart EV charging solutions / Remote control thanks to its smart features which enhance user experience.
- Maximum power: 22Kw (1 output)
- Wifi connection: Its digital system receives continuous updates to respond always in the requirements of each period.
- 3.5" color screen

Wallbox or Post eVolve Smart Series (wall or floor)

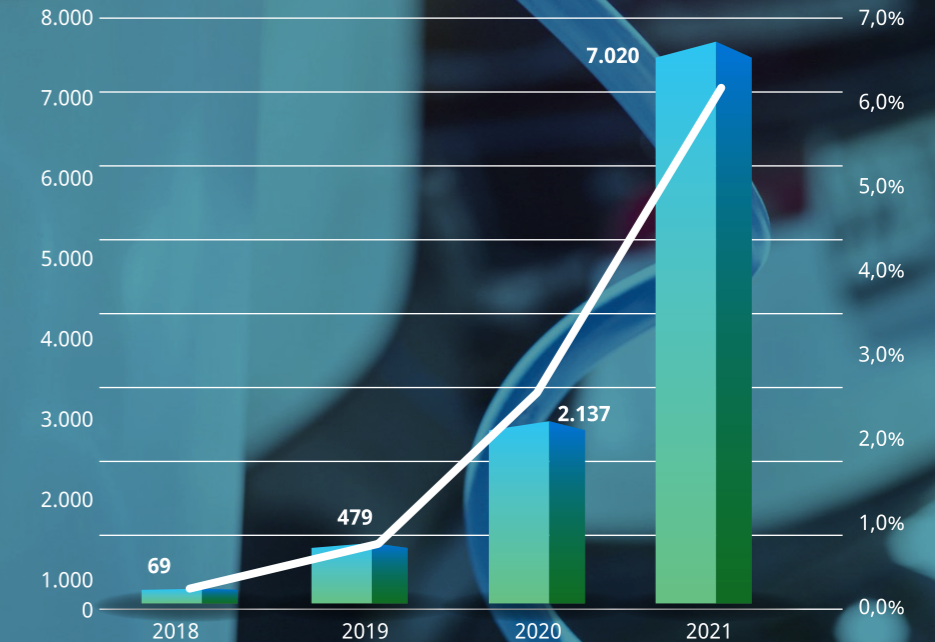

Designed to be installed in public access areas such as shopping malls, car parks, airports, gas stations as well as in private spaces such as companies and private car parks.

- Smart EV charging solutions / Remote control thanks to its smart features which enhance user experience.
- 2 outputs: Maximum power: 2 x 22Kw
- Integrated High Load Management: Energy balance for simultaneous charging of 2 vehicles.

Every day on the streets, we meet more and more vehicle chargers, which was extremely rare in the past. Everything reflects that this is going to be the new reality.

Forecasts show in 2021 sales of electric and plug-in hybrid vehicles will increase significantly as reflected in the following diagram (number display of electric and plug-in hybrid vehicle registrations).

The growing interest in electric vehicles makes knowledge even more important for drivers but also for all experts in the field.
