

EDC Drilling Fluids

. EDC Drilling Fluids EDC 95-11, EDC 99-DW, EDC 170 SE, and EDC 200 SE

Products in the EDC Drilling Fluids line are manufactured and marketed by The Special Fluids Division of TotalEnergies. Their ultra-low aromatic content is significantly less than that of other available products. EDC stands for Environmental Drilling Compound. These fluids are used to formulate drilling muds used to lubricate and cool the drill bit, bring cuttings back to the surface and stabilize well walls during drilling operations.

Ecosolutions by TotalEnergies Advantage

Our EDC drilling fluids were compared to other available reference products intended for the same use, mainly diesel cuts and clean oil drilling fluids. Clean oils have lower aromatic content and toxicity markers than diesel cuts but are still higher than EDC products. The comparison showed that the ultra-low aromatic content and the low level of toxicity markers of EDC drilling fluids significantly reduce ecosystem and health impacts. * *Benzene, Toluene, Ethylbenzene, Xylene, BTEX and BaP eq.*

The Environmental Performance

Leveraging innovation to serve continuous improvement, the label Ecosolutions by TotalEnergies involves developing products, services and solutions that enable our customers to improve their environmental footprint.
