

Tilenga and EACOP: Two ambitious projects in Africa

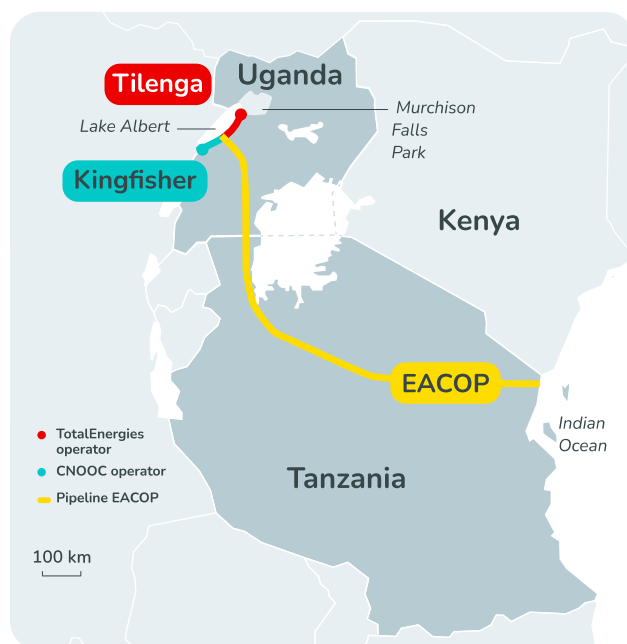

TotalEnergies

Oil and gas projects bring increased prosperity and development to Uganda and Tanzania

TotalEnergies works in partnership with Uganda and Tanzania to extract and transport oil and gas in the two countries. The resources are sourced from fields in Western Uganda and conveyed through Tanzania via an electrified underground pipeline.

As a responsible European partner, we contribute to improved local conditions by;

- **Higher standard of living:** We contribute to improving the countries' standard of living through local job creation, increased education, and better housing,
- **Biodiversity gains:** We prioritize protecting the countries' unique nature and wildlife,
- **A strong NGO dialogue:** We work closely with NGOs in areas such as human rights and nature conservation.

Oil and gas production

Drilling started: 2023	Production, barrels of oil per day at peak: Tilenga 190,000 Kingfisher 40,000	TotalEnergies operates the Tilenga field while CNOOC operates the Kingfisher field	Low emission design: The design of the production facilities and pipeline limits CO ₂ emissions to only 13 kg CO₂ per barrel
The Tilenga and Kingfisher oil fields are owned by TotalEnergies in partnership with Uganda's national oil company UNOC and Chinese CNOOC		EACOP (East African Crude Oil Pipeline): The pipeline that transports the oil through Tanzania with TotalEnergies owning 62%	

TotalEnergies creates local jobs and ensures skill training

It is a high priority that the project generates local jobs and that locals are trained to carry on the project. We also strive to use local suppliers where possible.

Modern houses

Like many infrastructure projects worldwide, the Tilenga and EACOP projects require land acquisition and expropriations.

The process of ensuring adequate compensation for affected groups is carried out by TotalEnergies and EACOP on behalf of the Ugandan and Tanzanian governments. It is conducted in accordance with the standards set by the International Finance Corporation, which is part of the World Bank.

TotalEnergies compensates the affected families with new and more modern houses with solar energy systems, a rainwater tank, and improved sanitary conditions.

"I am very grateful for the EACOP project for providing me with a new house and improving my family's standard of living."

– Mutabi Israel, a farmer who had his life transformed by EACOP

Jobs and compensation

The project creates between
60,000-80,000 jobs,
of which 18,000 are direct jobs

90%
of the jobs
are local

Relocated and
compensated
households: around
5,000 people in
775 households

Directly and indirectly affected persons:
around 100,000 equivalents to around
19,000 households,
which are compensated

Education for locals

Academies have been
established with
2.5 years
of training to carry
on the project

Local businesses
are trained in areas
such as agriculture
and financial
management

**Collaboration with
local universities
and businesses**
on research,
technology, safety,
and business
management

Approximately
3 million hours
of training for
local employees in
technical and ethical
standards

Access to water and electricity

More than 4,000 people in the Buliisa area of Uganda have better access to drinking water thanks to boreholes we have built. Access to water has particularly positive implications for women and girls, who previously walked between 10 and 20 km to fetch water for households.

For better access to electricity, TotalEnergies has signed two agreements on the development of renewable energy projects with both Uganda and Tanzania. Our ambition is 500 MW – 1 GW renewables projects in the countries. Additionally, we have offered 8,000 solar lamps to local communities.

Human rights must be respected

The project's suppliers are required to respect TotalEnergies' values in terms of human rights, our anti-bribery policy, and safety standards.

In TotalEnergies we react when we become aware of potentially critical conditions. For example, we have responded when activists are arrested, and a letter has been sent to Uganda's president expressing our concern about lack of freedom of expression. We are aware of the sensitive areas in which we operate.

Protection of Uganda's unique nature and wildlife

Uganda's unique nature must be protected, and therefore TotalEnergies' ambition is to increase biodiversity in the area. We restore forests and save endangered species, and overall, a 'net-positive' impact is created – meaning it is our clear ambition that nature is left in a better state than when the project began.

Health

Renovation of a **hospital and a health center**, including solar panel installations

Establishment of a center for **specialized emergency medical training**

Uganda is part of **TotalEnergies' Clean Cooking project**, which replaces cooking over open fires with gas for **100 million people** in Africa and India by 2030

Biodiversity

Populations of lions and elephants **increase by 25%**

Populations of antelopes and giraffes are **maintained**

The affected area in Uganda's Murchison Falls National Park constitutes 0.03% of the park. **80%** of this affected area will be **restored to its original state**

Poaching snares are **removed**

10,000 hectares of natural forest are protected for chimpanzee habitats
