Subject: Deployment of company rule CR-GR-HSE-417	

Dear all,

The company rule CR-GR-HSE-417 *Flammable and Combustible Liquids Storage Safety* was published on REFLEX on the 30/09/2019 and will be effective on the 30/03/2020, except for requirements that require work on tanks (to be carried out during the next internal inspection) and requirement 3.2.7 (30/09/2021). This company rule replaces CR-MS-HSEQ-332 et CR-MS-HSEQ-352 company rules. It is complementary to the operation rules (CR-MS-EXP-001 in particular).

A summary listing the main requirements is available on the first page of the company rule. To help you deploy this rule on the field, we offer in addition:

- A synthetic gap analysis (additions, modifications and deletions) between the old and the new rule, specific for M&S;
- A support file intended to list the requirements of this rule and enabling their compliance follow-up.

The CR-GR-HSE-417 company rule defines requirements to prevent the risks of leaks, overfilling, fires and explosion associated with storage of crude oil, various oil products and biofuels.

This company rule requires:

- Minimum safety equipment for the storage tanks, their retention bunds, and their associated piping and pump-stations;
- Respect of recognized standards to manage storage operations and liquid transfers.

This rule does not apply to services stations storages and to hydrocarbons in liquefied or refrigerated form (e.g. LPG, LNG).

☞ **I remind you that each affiliate must:**

- **Identify the gaps between its referential and the new requirements,**
- **Implement the associated action plans to correct the differences,**
- **Comply with the rule on the target date.**

Hans-Christian Gützkow
